Correction of: <https://publichealth.jmir.org/2023/1/e44204>

(*JMIR Public Health Surveill* 2024;10:e57203) doi: [10.2196/57203](https://doi.org/10.2196/57203)

In “Comparison of Four Active SARS-CoV-2 Surveillance Strategies in Representative Population Sample Points: Two-Factor Factorial Randomized Controlled Trial” (*JMIR Public Health Surveill* 2023;9:e44204) the authors noted one error.

In the originally published manuscript, the following sentence appeared in the “Study Design” section:

The 4 study arms represented all combinations of the two factors: (i) testing without condition (A) versus testing under the condition of upstream COVID-19 symptom prescreening (B) and (ii) testing of individuals (1) versus households (2) testing of individuals versus households.

This sentence has been corrected to:

The 4 study arms represented all combinations of two factors: i) testing unconditional (A) versus testing under the condition of upstream COVID-19 symptom prescreening (B), and ii) testing individuals (1) versus households (2).

The correction will appear in the online version of the paper on the JMIR Publications website on February 16, 2024, together with the publication of this correction notice. Because this was made after submission to PubMed, PubMed Central, and other full-text repositories, the corrected article has also been resubmitted to those repositories.

This is a non-peer-reviewed article. Submitted 07.02.24; accepted 07.02.24; published 16.02.24.
