This is a corrected version. See correction statement in: <https://publichealth.jmir.org/2025/1/e89905>

JMIR Public Health Surveill 2025;11:e88582; doi: [10.2196/88582](https://doi.org/10.2196/88582)

In “Assessment of Bidirectional and Threshold-Response Associations Between Cognitive Function and Physical Performance: Nationwide Cross-Sectional Study” [1], the authors noted one error in the abstract.

In the original paper, the following information was present:

This multicenter study of 20,868 older adults in China analyzed the bidirectional asymmetric and threshold-response associations between cognitive and physical function using logistic or linear regression and restricted cubic spline, with subgroup and interaction analyses.

This has been revised to the following:

This multicenter study of 20,671 older adults in China analyzed the bidirectional asymmetric and threshold-

response associations between cognitive and physical function using logistic or linear regression and restricted cubic spline, with subgroup and interaction analyses.

The correction will appear in the online version of the paper on the JMIR Publications website, together with the publication of this correction notice. Because this was made after submission to PubMed, PubMed Central, and other full-text repositories, the corrected article has also been resubmitted to those repositories.
